

TABLE OF CONTENTS

PREFACE	v
ABOUT THE AUTHORS	vi
ACKNOWLEDGEMENTS	vi
CONTENTS IN BRIEF	vi
LIST OF SYMBOLS AND ABBREVIATIONS	xix
1 INTRODUCTION	1
1.1 ADVANCES IN SECONDARY WASTE WATER TREATMENT	1
1.2 TERTIARY WASTE WATER TREATMENT	3
1.3 TEMPERATURE INFLUENCE ON ACTIVATED SLUDGE DESIGN	4
1.4 OBJECTIVE OF THE TEXT	6
2 ORGANIC MATERIAL AND BACTERIAL METABOLISM	7
2.1 MEASUREMENT OF ORGANIC MATERIAL	7
2.1.1 The COD test	7
2.1.2 The BOD test	10
2.1.3 The TOC test	13
2.2 COMPARISON OF MEASUREMENT PARAMETERS	14
2.3 METABOLISM	16
2.3.1 Oxidative metabolism	16
2.3.2 Anoxic respiration	18
2.3.3 Anaerobic digestion	19

3 ORGANIC MATERIAL REMOVAL	21
3.1 ORGANIC MATERIAL AND ACTIVATED SLUDGE COMPOSITION	21
3.1.1 Organic material fractions in waste water	21
3.1.2 The composition of organic sludge	24
3.1.2.1 Active sludge	24
3.1.2.2 Inactive sludge	25
3.1.2.3 Definition of sludge fractions	25
3.1.3 Mass balance of the organic material	26
3.2 STEADY-STATE MODEL OF THE ACTIVATED SLUDGE SYSTEM	31
3.2.1 Model development	31
3.2.1.1 Definition of sludge age	33
3.2.1.2 COD fraction discharged with the effluent	33
3.2.1.3 COD fraction in the excess sludge	33
3.2.1.4 COD fraction oxidised for respiration	37
3.2.1.5 Model summary	38
3.2.2 Model calibration	40
3.2.3 Model applications	43
3.2.3.1 Sludge mass and composition	43
3.2.3.2 Biological reactor volume	46
3.2.3.3 Sludge production and nutrient demand	48
3.2.3.4 Temperature effect	51
3.2.3.5 F/M ratio	52
3.2.4 Selection and control of the sludge age	54
3.3 AERATION	55
3.3.1 Aeration theory	57
3.3.1.1 Effect of impurities on k_{la} and DO_s	58
3.3.1.2 Effect of local pressure on DO_s	58
3.3.1.3 Effect of temperature on k_{la} and DO_s	59
3.3.1.4 Oxygenation capacity for surface aerators	60
3.3.1.5 Power requirement for diffused aeration	62
3.3.2 Methods to determine the oxygen transfer constant	63
3.3.2.1 Determination of the standard oxygenation capacity	63
3.3.2.2 Determination of oxygenation capacity in mixed liquor	65
3.3.2.3 Determination of the aeration efficiency	68
3.4 GENERAL MODEL OF THE ACTIVATED SLUDGE SYSTEM	71
3.4.1 Model development	73
3.4.2 Model calibration	76
3.4.3 Application of the general model	77
3.5 CONFIGURATIONS OF THE ACTIVATED SLUDGE SYSTEM	78
3.5.1 Conventional activated sludge systems	78
3.5.2 Sequential batch systems	80
3.5.3 Carrouseis	81
3.5.4 Aerated lagoons	82

4 NITROGEN REMOVAL	85
4.1 FUNDAMENTALS OF NITROGEN REMOVAL	86
4.1.1 Forms and reactions of nitrogenous matter	86
4.1.2 Mass balance of nitrogenous matter	88
4.1.3 Stoichiometrics of reactions with nitrogenous matter	93
4.1.3.1 Oxygen consumption	93
4.1.3.2 Effects on alkalinity	94
4.1.3.3 Effects on pH	97
4.2 NITRIFICATION	100
4.2.1 Nitrification kinetics	100
4.2.2 Nitrification in systems with non aerated zones	106
4.2.3 Nitrification potential and nitrification capacity	108
4.3 DENITRIFICATION	110
4.3.1 System configurations for denitrification	111
4.3.1.1 Denitrification with an external carbon source	111
4.3.1.2 Denitrification with an internal carbon source	112
4.3.2 Denitrification kinetics	115
4.3.2.1 Sludge production in anoxic/aerobic systems	115
4.3.2.2 Denitrification rates	116
4.3.2.3 Minimum anoxic mass fraction in the pre-D reactor	118
4.3.3 Denitrification capacity	120
4.3.3.1 Denitrification capacity in a pre-D reactor	120
4.3.3.2 Denitrification capacity in a post-D reactor	121
4.4 DESIGNING AND OPTIMISING NITROGEN REMOVAL.	124
4.4.1 Calculation of nitrogen removal capacity	124
4.4.2 Optimised design of nitrogen removal	128
4.4.2.1 Complete nitrogen removal	129
4.4.2.2 Incomplete nitrogen removal	132
4.4.2.3 Model enhancements	133
4.5 NEW DEVELOPMENTS IN NITROGEN REMOVAL SYSTEMS.	134
4.5.1 Nitrogen removal over nitrite - Sharon	135
4.5.1.1 Kinetics of high rate ammonium oxidation	137
4.5.1.2 Reactor configuration and operation	138
4.5.1.3 Required model enhancements	139
4.5.2 Nitrogen removal over nitrite - Babe	146
4.5.3 Anaerobic ammonium oxidation (Anammox)	147
4.5.3.1 Anammox process characteristics	150
4.5.3.2 Reactor design and -configuration	152
4.5.4 Effect on the main activated sludge process	157
4.5.5 Side stream nitrogen removal: evaluation and potential	163

5 PHOSPHORUS REMOVAL	165
5.1 BIOLOGICAL PHOSPHORUS REMOVAL	165
5.1.1 Mechanisms involved in biological phosphorus removal	165
5.1.2 Bio-P removal system configurations	169
5.1.3 Model of biological phosphorus removal	172
5.1.3.1 Enhanced cultures	172
5.1.3.2 Mixed cultures	177
5.1.3.3 Denitrification of bio-P organisms	181
5.1.3.4 Discharge of organic phosphorus with the effluent	183
5.2 OPTIMISATION OF BIOLOGICAL NUTRIENT REMOVAL	184
5.2.1 Influence of waste water characteristics	184
5.2.2 Improving substrate availability for nutrient removal	185
5.2.3 Optimisation of operational conditions	188
5.2.4 Resolving operational problems	191
5.3 CHEMICAL PHOSPHORUS REMOVAL	192
5.3.1 Stoichiometrics of chemical phosphorus removal	193
5.3.1.1 Addition of metal salts	193
5.3.1.2 Addition of lime	195
5.3.1.3 Effect on pH	195
5.3.2 Chemical phosphorus removal configurations	196
5.3.2.1 Pre-precipitation	198
5.3.2.2 Simultaneous precipitation	199
5.3.2.3 Post-precipitation	201
5.3.2.4 Sidestream precipitation	202
5.3.3 Design procedure for chemical phosphorus removal	205
5.4 NUTRIENT REMOVAL - DESIGN CASE	208

6 SLUDGE SETTLING	221
6.1 METHODS TO DETERMINE SLUDGE SETTLEABILITY	221
6.1.1 Zone settling rate test	221
6.1.2 Alternative parameters for sludge settleability	225
6.1.3 Relationships between different settleability parameters	225
6.1.4 Influence of sludge concentration and composition	226
6.2 MODEL FOR SETTLING IN A CONTINUOUS SETTLER	227
6.2.1 Determination of the limiting concentration X_l	231
6.2.2 Determination of the critical concentration X_c	232
6.2.3 Determination of the minimum concentration X_m	233
6.3 DESIGN OF SECONDARY SETTLERS	234
6.3.1 Optimised design procedure	234
6.3.2 Determination of the critical recirculation rate	238
6.3.3 Optimisation of the reactor - settler system	239
6.3.4 Applicability of the optimised settler design procedure	242
6.3.4.1 US EPA design guidelines	242
6.3.4.2 WRC and modified WRC design guidelines	243
6.3.4.3 STORA/STOWA design guidelines	243
6.3.4.4 ATV design guidelines	244
6.3.4.5 Solids flux compared with other design methods	244
6.3.5 Physical design aspects for sludge settlers	248
6.4 SETTLERS UNDER VARIABLE LOADING CONDITIONS	249
6.5 SLUDGE THICKENERS	253
6.6 SLUDGE BULKING AND SCUM FORMATION	255
6.6.1 Control of sludge bulking in aerobic systems	258
6.6.2 Control of bulking sludge in anoxic-aerobic systems	260
6.6.3 Non-specific measures to control bulking sludge	262
6.6.4 Causes and control of scum formation	265

7 NEW SYSTEM CONFIGURATIONS	267
7.1 MEMBRANE BIOREACTORS (MBR)	268
7.1.1 MBR configurations	270
7.1.1.1 Submerged MBR	271
7.1.1.2 Cross-flow MBR	273
7.1.1.3 Comparison of submerged and cross-flow MBR	275
7.1.2 Theoretical concepts of membrane filtration	277
7.1.3 MBR design considerations	279
7.1.3.1 Pre-treatment	279
7.1.3.2 Module configuration	280
7.1.3.3 Membrane aeration	281
7.1.3.4 Key data of different membrane types	282
7.1.3.5 Impact on activated sludge system configuration	283
7.1.3.6 Integrated MBR design example	286
7.1.4 MBR operational considerations	296
7.1.4.1 Operation of submerged membranes	296
7.1.4.2 Operation of cross-flow membranes	297
7.1.4.3 Membrane fouling	297
7.1.4.4 Membrane cleaning	298
7.1.5 MBR technology: evaluation and potential	301
7.2 AEROBIC GRANULATED SLUDGE	302
7.2.1 Mechanisms responsible for granule formation	304
7.2.2 Design and operation of aerobic granulated sludge reactors	306
7.2.3 Start-up of aerobic granulated sludge reactors	308
7.2.4 Granulated sludge: evaluation and potential	309

8 SLUDGE TREATMENT AND DISPOSAL	311
8.1 EXCESS SLUDGE QUALITY AND QUANTITY	311
8.2 AEROBIC DIGESTION	314
8.2.1 Kinetic model for aerobic sludge digestion	315
8.2.1.1 Variation of the volatile sludge concentration	316
8.2.1.2 Variation of the oxygen uptake rate	316
8.2.1.3 Variation of the nitrate concentration	317
8.2.1.4 Variation of the alkalinity	317
8.2.1.5 Variation of the BOD	321
8.2.2 Aerobic digestion in the main activated sludge process	321
8.2.3 Aerobic digester design	324
8.2.4 Optimisation of aerobic sludge digestion	329
8.2.5 Operational parameters of the aerobic digester	334
8.3 ANAEROBIC DIGESTION	339
8.3.1 Stoichiometry of anaerobic digestion	342
8.3.2 Configurations used for anaerobic digestion	344
8.3.3 Influence of operational parameters	347
8.3.4 Performance of the high rate anaerobic digester	350
8.3.5 Energy generation in anaerobic sludge digesters	356
8.3.6 Design and optimisation of anaerobic digesters	357
8.4 STABILISED SLUDGE DISPOSAL	359
8.4.1 Natural sludge drying	360
8.4.2 Design and optimisation of natural sludge drying beds	364
8.4.2.1 Determination of the percolation time	365
8.4.2.2 Determination of the evaporation time	366
8.4.2.3 Influence of rain on bed productivity	372
8.4.3 Accelerated sludge drying with external energy	373
8.4.3.1 Use of solar energy	374
8.4.3.2 Use of combustion heat from biogas	376

9 ANAEROBIC-AEROBIC WASTE WATER TREATMENT	379
9.1 MODERN ANAEROBIC WASTE WATER TREATMENT PROCESSES	380
9.1.1 Performance of different anaerobic treatment configurations	382
9.1.1.1 Anaerobic filter	382
9.1.1.2 Fluidised and expanded bed systems	383
9.1.1.3 Upflow Anaerobic Sludge Blanket (UASB) reactor	384
9.1.1.4 The RALF system	385
9.1.2 Comparison of different anaerobic sewage treatment systems	386
9.2 MODEL FOR THE ANAEROBIC PRE-TREATMENT PROCESS	387
9.2.1 Sludge age as the key parameter for anaerobic treatment	388
9.2.2 Influence of temperature on anaerobic sewage digestion	390
9.3 ANAEROBIC-AEROBIC SYSTEMS FOR SECONDARY TREATMENT	393
9.3.1 Effect of anaerobic pre treatment on secondary post treatment	394
9.3.2 Stabilisation of aerobic sludge in the UASB reactor	396
9.3.3 Optimised design of anaerobic-aerobic treatment systems	398
9.4 ANAEROBIC-AEROBIC SYSTEMS FOR TERTIARY TREATMENT	403
9.4.1 Anaerobic digestion with reduced methanogenic efficiency	403
9.4.2 Application of new nitrogen removal configurations	405
9.5 MODIFICATIONS OF THE UASB REACTOR	406
9.5.1 The EGSB reactor	406
9.5.2 Two stage anaerobic digestion	407

10 INTEGRATED COST-BASED DESIGN AND OPERATION	409
10.1 PREPARATIONS FOR SYSTEM DESIGN	410
10.1.1 The basis of design	410
10.1.1.1 Waste water characteristics	411
10.1.1.2 Kinetic parameters and settleability of the sludge	414
10.1.2 Costing data	414
10.1.2.1 Investment costs	414
10.1.2.2 Operational costs	418
10.1.2.3 Annualised costs	419
10.1.3 Performance objectives	420
10.1.4 Applicable system configurations	421
10.1.5 Limitations and constraints	424
10.2 OPTIMISED DESIGN PROCEDURE	426
10.2.1 System A1: Conventional secondary treatment	426
10.2.2 System A2: Secondary treatment with primary clarification	436
10.2.3 System B1: UASB pre-treatment with nitrification	439
10.2.4 System C1: Tertiary treatment with nitrogen removal	452
10.2.5 System C2: Tertiary treatment with N and P removal	457
10.2.6 System comparison	464
10.2.7 Influence of the waste water temperature	465
10.2.8 Influence of the sludge age	467
10.2.9 Comparison of different operational regimes	469
10.3 OPERATIONAL OPTIMISATION PROCEDURE	472
10.4 FINAL REMARKS	474

APPENDICES	477
A1 DETERMINATION OF THE OXYGEN UPTAKE RATE	479
A1.1 DETERMINATION OF THE APPARENT OUR	480
A1.2 CORRECTION FACTORS OF THE APPARENT OUR	480
A1.2.1 Representativeness of mixed liquor operational conditions	480
A1.2.2 Critical dissolved oxygen concentration	481
A1.2.3 Hydraulic effects	482
A1.2.4 Absorption of atmospheric oxygen	482
A1.2.5 The relaxation effect	485
A2 CALIBRATION OF THE GENERAL MODEL	489
A2.1 CALIBRATION WITH CYCLIC LOADING	490
A2.2 CALIBRATION WITH BATCH LOADING	494
A3 THE NON-IDEAL ACTIVATED SLUDGE PROCESS	497
A4 DETERMINATION OF NITRIFICATION KINETICS	501
A4.1 METHODOLOGY	502
A4.2 APPLICATION EXAMPLE	504
A5 EXTENSIONS TO THE SIMPLIFIED MODEL	509
A5.1 IMPERFECT SOLID-LIQUID SEPARATION IN FINAL SETTLER	509
A5.1.1 Particulate organic nitrogen in the effluent	509
A5.1.2 Particulate organic phosphorus in the effluent	511
A5.1.3 Excess sludge production and composition	511
A5.2 NITRIFIER FRACTION IN THE VOLATILE SLUDGE MASS	512
SUBJECT INDEX	515
REFERENCE LIST	521
